

30 July 2013

The Company Announcements Office
Australian Securities Exchange Limited

QUARTERLY ACTIVITIES REPORT

JUNE 2013

HIGHLIGHTS

MALI

- In excess of 13,300m of Reverse Circulation (RC), Diamond and Auger drilling completed during the quarter.
- High grade gold intersections at Ntiola Gold Prospect extend gold zone to 150m depth and expand scale of potential open pit mineralisation. Selected drill highlights include;
 - 4m @ 22.49 g/t Au
 - 14m @ 3.66 g/t Au
 - 10.5m @ 3.15 g/t Au (ended in mineralisation)
 - 9m @ 3.33g/t Au
 - 12m @ 2.54 g/t Au
 - 10m @ 2.92 g/t Au
- Mineralisation at Ntiola remains open along strike and at depth.
- Auger drilling results have defined multiple high tenor gold targets with excellent potential for discovery of repetitions of high grade Ntiola-style mineralisation.
- Memorandum of Understanding entered into between Morila SA and Birimian Gold recording the intention to work co-operatively on mine permitting and toll treatment of Ntiola ore at the Morila Processing Plant.
- Plans well advanced for next phase of exploration and resource evaluation drilling.
- New prospect and target generation progressing well over the broader Massigui Project.

LIBERIA

- Permitting completed for next phase of ground disturbing exploration at Basawa.
- Priority gold prospects at Before Camp and Newtown to be tested in the near term.

CORPORATE

- Managing Director's services secured for an additional two years.
- Birimian in a strong financial position with \$3.1 million cash at hand.

During the June 2013 quarter Birimian Gold Limited (ASX:BGS; “Birimian Gold” and “Company”) focused its exploration and evaluation activities on priority targets at the Massigui Project, in southern Mali (Figure 1). In particular, the Company concentrated its efforts on advancing the Ntiola Prospect with programs of auger, reverse circulation (RC) and diamond drilling.

At the Ntiola Prospect, RC and diamond drilling (2,972m) intersected multiple highly significant zones of gold mineralisation (Figure 2). Drill highlights included;

- **4m @ 22.49 g/t Au from 124m, including 1m @ 76.5 g/t Au**
- **14m @ 3.66 g/t Au from 58m**
- **10.5m @ 3.15 g/t Au from 70m (ended in mineralisation)**
- **9m @ 3.33g/t Au from 105m**
- **12m @ 2.54 g/t Au from 137m**
- **10m @ 2.92 g/t Au from 137m**

The drilling results at Ntiola confirmed the excellent continuity of gold mineralisation between drill holes to a depth below 150m; doubling the previously known depth extent of drill-defined mineralisation. These results significantly expand the scale of potential open pittable gold mineralisation at the Ntiola Prospect.

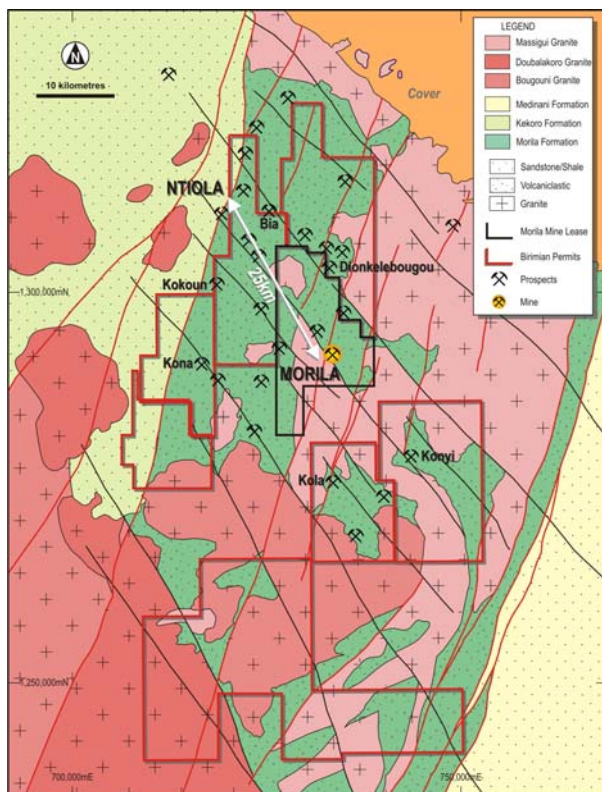

Figure 1. Massigui Gold Project. Permit areas and geology. The Ntiola Prospect is located in the north-west of the Project area.

Mineralisation at Ntiola is open at depth. The information and data collected from the recent drilling has enabled the Company to infer a moderate south plunge to high grade zones, which Birimian Gold believes offers considerable scope to extend the mineralised zone and delineate additional gold resources within the Ntiola Lode. Follow up diamond drilling will commence next quarter to test for further high grade extensions to mineralisation.

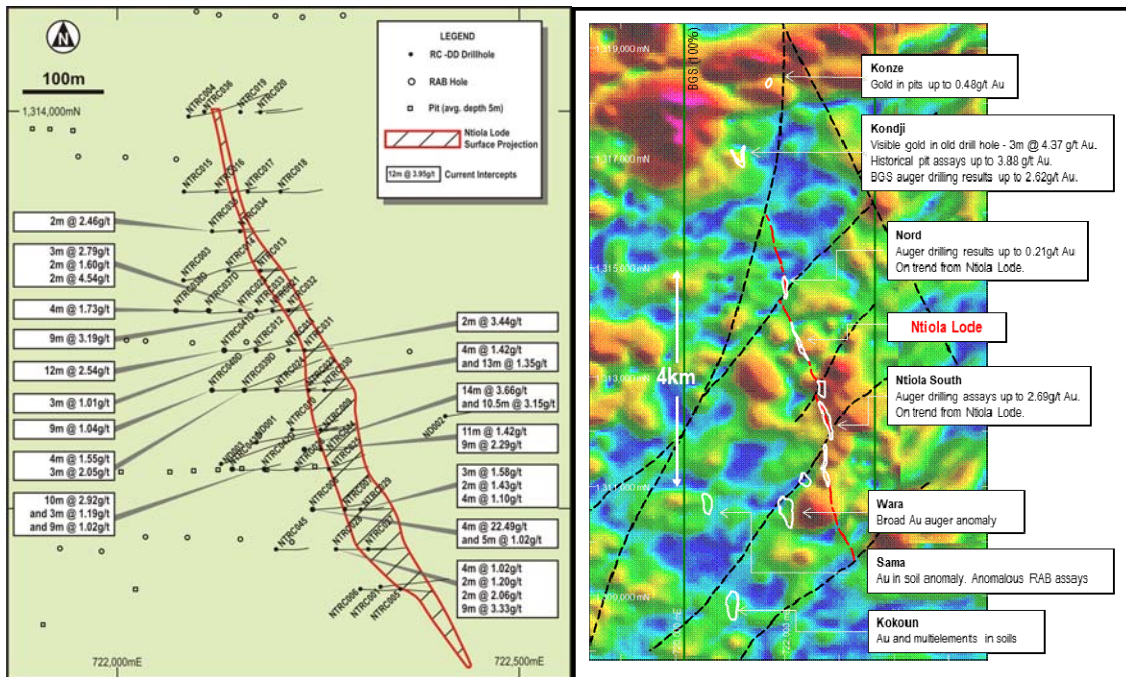

Figure 2. Ntiola Prospect drill hole locations and analytical results reported during the June 2013 quarter.

Figure 3. Ntiola Region. Prospects are shown in white outline over the ASIG magnetic image.

In parallel with the recent RC and diamond drilling programs the Company continued to explore the greater Massigui Project area. Reconnaissance auger drilling (10,405m) undertaken during the quarter defined multiple high tenor gold anomalies over 4km of strike along trend from the Ntiola Lode (Figure 3).

A number of discrete gold zones reporting up to 2.69g/t Au were returned from auger drilling assay results. The results are highly encouraging as they confirm the potential for additional shallow gold mineralisation, similar to the Ntiola Lode. These zones represent high priority drill targets that the Company intends to rapidly advance to drill testing.

The Company believes there is significant scope to delineate additional gold mineralisation at the Ntiola Prospect and within the highly prospective Massigui Project area. Plans are well advanced for further exploration and evaluation drilling during the next quarter, including preliminary field and office based studies to evaluate the potential to develop an open pit mining operation at Ntiola.

Memorandum of Understanding

The Massigui Project ground holding surrounds the operating but underutilised Morila Gold Mine Treatment Plant. The Morila Project is a joint venture which is managed by Randgold Resources (LSE:RRS: "Randgold"). The existing Morila Mine infrastructure, currently treating stockpiled material, is located only 25km away from the Ntiola Prospect.

During the quarter the Company entered into a Memorandum of Understanding with Société des Mines de Morila SA, the operator of the Morila Treatment Plant, which records both parties' intention to work co-operatively on mine permitting and toll treatment, on mutually agreed economic terms, for any gold ore that Birimian delineates on the Massigui Project.

Proximity to Morila Processing Plant and the undertakings recorded in the Memorandum of Understanding with Morila will provide Birimian Gold with significant opportunities to ensure low capital and operational costs can be achieved at any future mine development at Ntiola and within the broader Massigui Project.

WEST AFRICAN GOLD PROJECTS

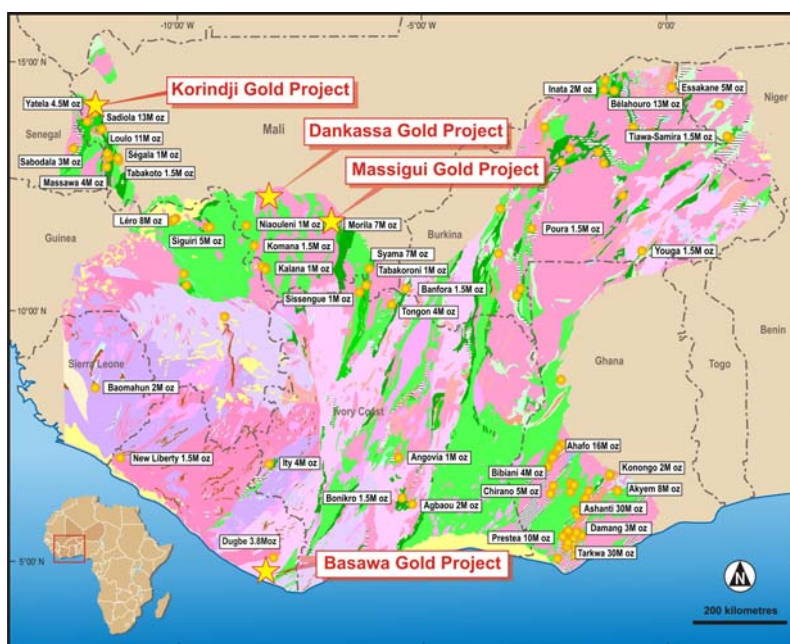

Figure 4. Location of Birimian Gold Limited's projects in West Africa

Massigui Gold Project, Mali

Birimian Gold's 1,638km² Massigui Project abuts and surrounds the Morila Mine Lease. The Massigui Project covers highly prospective strike extensions of the same geological sequence that hosts the Morila Gold Mine (Figure 4).

The Morila Gold Mine was commissioned in October 2000 and has produced over six million ounces of gold since inception. Open pit mining ceased at the Morila Gold Mine in 2009. Since then the mine has been treating stockpiles. The treatment of existing stockpiles through the 4Mtpa Morila processing plant is currently scheduled to be completed in 2015, after which time the plant will be reconfigured to treat tailings.

Dankassa Gold Project, Mali

The Dankassa Gold Project covers 510km² of highly prospective ground in southern Mali (Figure 4). Field work at the Dankassa Project has been placed on hold while the Company focuses its resources on expanding the exploration and evaluation drilling programs at the Massigui Project.

The Company believes further reconnaissance drilling is warranted to test for economic mineralisation on the Dankassa Gold Project and will continue to evaluate targets on all properties within the Company's portfolio to ensure resources are directed to the highest priority targets.

Basawa Gold Project, Liberia

The Basawa Gold Project covers 1,000km² of gold prospective terrain in southeastern Liberia (Figure 4). Significant gold mineralisation, including the 3.8Moz Dugbe-Joe Village Gold Deposit (Hummingbird Resources), occurs along ENE trending structures to the north of Basawa. To date, Birimian Gold has identified two such gold-prospective ENE-trending structures within the Basawa Gold Project area; the Bafawehn Structure and the Betu Structure.

The Company previously reported highly significant analytical results from an extensive soil sampling campaign conducted over approximately 15km of gold-prospective strike at the Bafawehn Gold Trend and over a portion of the Betu Gold Trend. Large-scale, high tenor, gold-in-soil anomalies were defined at Before Camp and Newtown Prospects, adjacent to extensive artisanal gold mining sites.

During the June quarter the Company received approval from the relevant government agencies to commence the next phase of ground disturbing exploration at Basawa. The Company's immediate priority will be to advance the Before Camp and Newtown Prospects to drill-ready status. Field work is expected to commence at the end of the current wet season.

CORPORATE

During the quarter the Company was pleased to renew and extend Managing Director's, Mr. Joyce, employment contract for a further two year term effective from 1 July 2013. Mr. Joyce has been instrumental in developing and implementing the Company's West African exploration strategy. Securing Mr. Joyce's services for an additional two years provides the Company with a solid platform for the future.

Birimian Gold is in a strong financial position with \$3.1 million cash available. The Company will utilize these funds to continue its program of exploration and evaluation drilling at its West Africa Gold Projects with a focus on advancing the Ntiola Prospect.

For further information please contact Mr Kevin Joyce, Managing Director, Birimian Gold Limited.

Competent Persons Declaration

The information in this announcement that relates to exploration results is based on information compiled by or under the supervision of Kevin Anthony Joyce. Mr Joyce is Managing Director of Birimian Gold Limited and a Member of the Australian Institute of Geoscientists. Mr Joyce has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and the activity he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Exploration Results. Mr Joyce consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
